

NOVA TECHNOLOGY(HK)CO.,LIMITED

Dear Ing. Andrés Sebastián Carrillo Albuja,

We already shipped 1pcs iezometer last week through the fastest method DHL, please follow the tracking number: 7023863744.

We also arranged the shipment of other boards today:

1pcs elongometer and 1pcs thermocouple(With firmware)

1pcs Acelerografo, 1pcs digitalizador, 1pcs Mobile Colimator and 1pcs Fixed Colimator(Without firmware)

We are still waiting for the tracking number from our forwarder, will share tomorrow morning.

The following is a detailed report on the current status of our work:

1) Firmware programming progress:

Complete:

Piezometer, elongometer and thermocouple

In debugging process:

Acelerografo and digitalizador are expected to be finished within this week.

Mobile and Fixed Colomator are expected to be finishes within next week

2) Regarding the test (summary):

Thermocouples: Overall hardware functionality test; temperature acquisition was compared using thermocouples and mercury thermometers.

Piezometer: Overall hardware functionality test; pressure sensor data acquisition and solenoid valve control were tested.

Elongometer: Overall hardware functionality test; triaxial stress data reading was tested.

Fixed Colimator: Overall hardware functionality test; testing laser source transmission control.

Mobile Colimator: Overall hardware functionality test; motor movement control, and photodiode testing.

Aclerografo:Overall hardware testing, three-axis accelerometer reading, Raspberry Pi communication.

Digitalizador: Overall hardware testing, high-precision AD acquisition, Raspberry Pi communication.

Due to specific nature of the application environment, further testing in your side is required.

3) Programming guide & tools:

The programming guide needs to be confirmed with the engineer tomorrow morning, but I think engineer may take some time to prepare it as they are focus on debugging work now.
